AMERICAN FASTENERS COMPANY

American Fasteners Company produces consistent high quality smooth nails from bright and hot dip galvanized wire at our facility in Jurupa Valley California on the very best equipment available. Our products are certified by International Code Council (ICC) to comply with the requirements of ASTM F1667, the International Building Code (IBC) and the International Residential Code (IRC).

OUR HOT DIP GALVANIZED NAILS ARE BETTER because our unique manufacturing process provides the smoothest and most consistent coating of molten zinc (Hot Dip Galvanize) available on a nail. The molten zinc coating on AFC nails exceeds the minimum specification for weight of coat by nearly 2x. ICC has certified AFC nails suitable for all applicable light construction applications having met the requirements of ASTM A153D, which establishes the zinc coating weight required for hot dip galvanized nails in order to be classified as "Class D".

See our independent lab test results and our ICC report (ESR 3801) online at <http://www.americanfastenersco.com/icc-certificate.html>

All AFC products not only meet our demanding specifications to ensure compliance to applicable specification, but are also made and packaged in such a way to provide our customers (and yours) with a positive experience. Strong cartons with strap closures, on good pallets, deliver quality nails, collated with custom formulated plastic and tape, to your warehouse. The pursuit of this positive experience means plastic strip lengths of 28-30 and has us package our plastic strip nails in sets of 5 (rather than alternating head and point), so that your customer can go from the box to his bags without reorienting the strips. This attention to detail is not exhausted on packaging. The plastic, position, pitch and hinge are integral to a nail that runs with minimal misfires. We believe that our nail is superior to competitive offerings anywhere in the world and that your customer will notice and appreciate the differences.

STUDIES CONFIRM consumers are more likely to change suppliers as a result of poor performance (nail misfires) and back orders than over price.
